

### **IMPORTANT INFORMATION ABOUT DRAGONFLY NYMPH ORDERS**

First and foremost, the Wells Chamber of Commerce would like to thank you for your involvement in our Dragonfly Nymph Program over the years.

As you are aware, the availability of the Nymphs is totally controlled by weather conditions. To keep everything fair and equitable the ordering process is as follows:

1. Each household will be limited to a maximum of 50 Nymphs for their initial order. The orders will be filled on a first come, first served basis.
2. If you wish to order more than 50 Nymphs, an additional order can be placed that we will fill, based on the availability of the Nymphs, after the initial orders of 50 each are filled.
3. To place an order for any additional Nymphs, you must call or email Darr at the Wells Chamber of Commerce at 207-646-2451 • [wellschamber@wellschamber.org](mailto:wellschamber@wellschamber.org). Additional orders can only be placed for the second pick-up weekend.

We thank you for your understanding.

## 2018 DRAGONFLY ORDER FORM

**PLEASE PRINT**

NAME \_\_\_\_\_  
ADDRESS \_\_\_\_\_  
CITY \_\_\_\_\_ STATE \_\_\_\_\_ ZIP CODE \_\_\_\_\_  
PHONE \_\_\_\_\_ ALTERNATE PHONE \_\_\_\_\_

**NO ORDERS WILL BE SHIPPED!**

**NO REMINDER CALLS WILL BE MADE!**

**NO MONEY WILL BE REFUNDED FOR ORDERS NOT PICKED UP!**

**Dragonfly Nymphs** – Dragonfly nymphs are the beginning stage of the commonly called “Devil’s Darning Needle” or “Mosquito Hawk” native to the woodland ponds and swampy areas of the world. There are 450 species of dragonflies native to North America alone. The nymphs develop buried in the muddy shallows where they consume huge numbers of mosquitoes and other insects. They are considered beneficial insects as they reduce populations of pest insects in their surrounding environment. They do not sting and do not bite humans.

### **Fifty nymphs will cover up to one acre.**

Nymphs can be introduced to fresh water ponds, marshes, swamps and other slow moving waterways where they will complete their metamorphosis into adults and continue to prey upon mosquitoes in large quantities. The nymphs will climb out of the water onto waterside vegetation and hatch. The females mate and lay eggs in the areas surrounding the water, and the cycle continues.

Dragonfly nymphs are cannibalistic, so be sure not to keep them in an overcrowded condition. As long as there are sufficient numbers of other insects to hunt, cannibalism will not become a problem.

**How are nymphs placed** - Nymphs arrive in plastic containers with oxygen and moss. Upon receiving the nymphs, release immediately, spacing them two to four feet apart to insure an adequate food supply. The nymphs should be placed at the shoreline of shallow water (fresh and standing) where mosquitoes breed, such as in areas where peepers can be heard or where cattails grow. The water should be free of fish, which like to eat nymphs.
